# **Test Equipment Solutions Datasheet**

Test Equipment Solutions Ltd specialise in the second user sale, rental and distribution of quality test & measurement (T&M) equipment. We stock all major equipment types such as spectrum analyzers, signal generators, oscilloscopes, power meters, logic analysers etc from all the major suppliers such as Agilent, Tektronix, Anritsu and Rohde & Schwarz.

We are focused at the professional end of the marketplace, primarily working with customers for whom high performance, quality and service are key, whilst realising the cost savings that second user equipment offers. As such, we fully test & refurbish equipment in our in-house, traceable Lab. Items are supplied with manuals, accessories and typically a full no-quibble 2 year warranty. Our staff have extensive backgrounds in T&M, totalling over 150 years of combined experience, which enables us to deliver industry-leading service and support. We endeavour to be customer focused in every way right down to the detail, such as offering free delivery on sales, covering the cost of warranty returns BOTH ways (plus supplying a loan unit, if available) and supplying a free business tool with every order.

As well as the headline benefit of cost saving, second user offers shorter lead times, higher reliability and multivendor solutions. Rental, of course, is ideal for shorter term needs and offers fast delivery, flexibility, try-before-you-buy, zero capital expenditure, lower risk and off balance sheet accounting. Both second user and rental improve the key business measure of Return On Capital Employed.

We are based near Heathrow Airport in the UK from where we supply test equipment worldwide. Our facility incorporates Sales, Support, Admin, Logistics and our own in-house Lab.

All products supplied by Test Equipment Solutions include:

- No-quibble parts & labour warranty (we provide transport for UK mainland addresses).
- Free loan equipment during warranty repair, if available.
- Full electrical, mechanical and safety refurbishment in our in-house Lab.
- Certificate of Conformance (calibration available on request).
- Manuals and accessories required for normal operation.
- Free insured delivery to your UK mainland address (sales).
- Support from our team of seasoned Test & Measurement engineers.
- ISO9001 quality assurance.

### **Definitions**

### Specification (spec):

Specifications represent warranted performance of a calibrated instrument that has been stored for a minimum of 2 hours within the operating temperature range of 0 to 55 °C, unless otherwise stated, and after a 45 minute warm-up period. The specifications include measurement uncertainty. Data represented in this document are specifications unless otherwise noted.

### Typical (typ):

Typical (typ) describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level at room temperature (approximately 25 °C). Typical performance does not include measurement uncertainty.

### Nominal (nom) or measured (meas):

Quality Second User Test Editorner T Nominal (nom) or measured (meas) describes a performance attribute that is by design or measured during the design phase for the purpose of communicating sampled, mean or average performance, such as the 50 ohm connector or amplitude drift vs. time. This data is not warranted and is measured at room temperature (approximately 25 °C).

For example the Pulse, AM, and FM can run concurrently and all will modulate the output RF. This is useful for simulating signal impairments, FM chirp RADAR, or scan modulation.

- 1. AM specifications apply 6 dB below maximum specified power and down to -15 dBm for Option 520 or -20 dBm for Option 540 from 15 to 35 °C with ALC on.
- 2. ALC off is used for narrow pulse modulation and/or high AM depths with envelope peaks below ALC operating range. Carrier power level will be accurate after a power search is executed.
- 3. Deep AM with ALC on provides increased AM depths and improved distortion, together with closed-loop internal leveling. This mode requires a repetitive AM waveform (frequency > 10 Hz) with peaks > -5 dBm (nom), excluding step-attenuator setting).
- 4.  $\pm$  2 dB @ 40 dB, and 50 dB < 31.8 GHz, and  $\pm$  4 dB @ 50 dB > 31.8 GHz (meas).
- 5. From 5 MHz to 50 MHz carrier roll off is < 5 dB at 50 kHz rate. From 50 MHz to 3.2 GHz rate is useable up to 100 kHz. Above 3.2 GHz rate is useable to 1 MHz.

#### **Power requirements**

100 or 120 VAC, 50 or 60 Hz, 400 Hz 220 or 240 VAC, 50 or 60 Hz 280 Watts maximum

#### Operating temperature range

0 to 55 °C

#### Storage temperature range

-40 to 70 °C

#### Operating and storage altitude

Up to 15,000 ft or 4,600 m

Environmental stress
Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include but are not limited to temperature, humidity, shock, vibration, altitude, and power line conditions. Test Methods are aligned with IEC 60068-2 and levels are similar to MIL-PRF-28800F Class 3.

#### Safety

Complies with European Low Voltage Directive 2006/95/EC

- IEC/EN 61010-1, 3rd Edition
- Canada: CSA C22.2 No. 61010-1-12
- USA: UL 61010-1 3rd Edition

#### **EMC**

Complies with European EMC Directive 2004/108/EC

- IEC/EN 61326
- CISPR Pub 11 Group 1, class A
- AS/NZS CISPR 11
- ICES/NMB-001

#### Memory

Memory is shared by instrument states, user data files, sweep list files, and other files. Option 006 instrument security allows storage of up to 8 GB. Depending on how the memory is utilized, a maximum of 1000 instrument states can be saved.

#### Security (Option 006)

Option 006 "Removable memory card & Instrument security" allows the following:

- Removable 8 GB solid state memory (SD card) from rear pane.
- User can force all files to be stored only on external memory card including instrument states, user data files, sweep list files, and other files
- Memory sanitizing, memory sanitizing on power on, and display blanking
- Disable USB ports

#### Self-test

Internal diagnostic routines test most modules in a preset condition. For each module, if its node voltages are within acceptable limits, the module "passes" the test.

#### Weight

N5183B-513/520:  $\leq$  14.5 kg (32 lb.) net,  $\leq$  29.5 kg (65 lb.) shipping N5183B-532/540:  $\leq$  15.0 kg (33 lb.) net,  $\leq$  29.9 kg (66 lb.) shipping

#### **Dimensions**

88 mm H  $\times$  426 mm W  $\times$  489 mm L (length includes rear panel feet) (3.5 in H  $\times$  16.8 in W  $\times$  19.2 in L)

Max length (L) including RF connector tip to end of rear panel feet is 508 mm (20 in)

#### Recommended calibration cycle

36 months

#### ISO compliant

This instrument is manufactured in an ISO-9001 registered facility in concurrence with Keysight Technologies' commitment to quality.

# Inputs and Outputs

Front panel connectors (all connectors are I	BNC unless otherwise stated)
RF output	Output impedance 50 $\Omega$ (nom)
Option 513/520	Precision APC-3.5 male, or Type- N with Option 1ED
Option 532/540	Precision 2.4 mm male; plus 2.4—2.4 mm and 2.4-2.9 mm female adapters
Maximum reverse power	0.5 W, 0 Vdc
USB 2.0	Used with a memory stick for transferring instrument states, licenses and other files into or out of the instrument. Also used with U2000 Series USB average power sensors.
Rear panel connectors	
Rear panel inputs and outputs are 3.3 V CMOS or TTL voltage levels.	S, unless indicated otherwise. CMOS inputs will accept 5 V CMOS, 3 V CMOS,
RF output (1EM)	<ul> <li>Output impedance 50 Ω (nom)</li> <li>Option 513/520 : Precision APG-3.5 male, or Type- N with option 1ED</li> <li>Option 532/540: Precision 2.4 mm male; plus 2.4—2.4 mm and 2.4-2.9 mm female adapters</li> </ul>
Sweep out	Generates output voltage, 0 to $\pm 10$ V when the signal generator is sweeping. This output can also be programmed to indicate when the source is settled or output pulse video and is TTL and CMOS compatible in this mode. Output impedance < 1 $\Omega$ , can drive 2 k $\Omega$ . Damage levels are $\pm$ 15 V.
Ext1	External AM/FM/PM #1 input: Nominal input impedance is 50 $\Omega/600~\Omega/1M\Omega$ nominal: Damage levels are $\pm$ 5 V.
Ext2	External AM/FM/PM #2 input: Nominal input impedance is 50 $\Omega/600~\Omega/1M\Omega$ nominal: Damage levels are $\pm$ 5 V.
Pulse	External pulse modulation input. This input is TTL and CMOS compatible. Low logic levels are $0 \text{ V}$ and high logic levels are $+1 \text{ V}$ . Nominal input impedance is $50 \Omega$ . Input damage levels are $\leq -0.3 \text{ V}$ and $\geq +5.3 \text{ V}$ .
Trigger 1 (in)	Accepts TTL and CMOS level signals for triggering point-to-point in sweep mode. Damage levels are $\leq -0.3$ V and $\geq +5.3$ V.
Trigger 2 (out)	Default use is with sweep mode. The signal is high at start of dwell, or when waiting for point trigger in manual sweep mode; low when dwell is over or point trigger is received. This output can also be programmed to indicate when the source is settled, pulse synchronization, or pulse video. Outputs a 2.5V into 50 $\Omega$ nominal. Input damage levels are $\leq -0.3$ V and $\geq +5.3$ V.
Reference input	Accepts a 10 MHz reference signal used to frequency lock the internal time base. Option 1ER adds the capability to lock to a frequency from 1 MHz to 50 MHz. Nominal input level $-3.5$ to $+20$ dBm, impedance $50~\Omega$ , sine or square waveform.
10 MHz out	Outputs the 10 MHz reference signal used by internal timebase. Level nominally +5 dBm. Nominal output impedance 50 $\Omega$ . Input damage level is +16 dBm.
ALC in	This female BNC connector is used for negative external detector leveling. — Input impedance: 100 k $\Omega$ (nominal) — Signal levels: -0.2 mV to -0.5 V — Damage levels: <-12 V and > 1 V
Z-Axis output	This female BNC connector supplies a +5 V (nominal) level during retrace and band switch intervals of a step or list sweep. During step or list sweep, this connector supplies a –5 V (nominal) level when the RF frequency is at a marker frequency and intensity marker mode is on. The load impedance should be $\geq 5~\mathrm{k}\Omega$ .

USB Type-A	There are two USB 2.0 Type-A connectors on the rear panel. Used with a memory stick for transferring instrument states, licenses and other files into or out of the instrument; also used with U2000 Series USB power sensors.
USB Type-B	There is one USB 2.0 Type-B connectors on the rear panel. The USB connector provides remote programming functions via SCPI.
LAN (1000 BaseT)	The LAN connector provides the same SCPI remote programming functionality as the GPIB connector. The LAN connector is also used to access the internal web server and FTP server. The LAN supports DHCP, sockets SCPI, VXI-11 SCPI, connection monitoring, dynamic hostname services, TCP keep alive. This interface is LXI class C compliant. Trigger response time for the immediate LAN trigger is 0.5 ms (minimum), 4 ms (maximum), 2 ms (typ); delayed/alarm trigger is unknown. Trigger output response time is 0.5 ms (minimum), 4 ms (maximum), 2 ms typical.
GPIB	The GPIB connector provides remote programming functionality via SCPI.
